

Contents

<i>List of contributors</i>	xiii
1. Introduction	1
<i>Hisashi Yamamoto</i>	
2. Synthetic utility of bulky aluminium reagents as Lewis acid receptors	5
<i>Keiji Maruoka</i>	
1. Introduction	5
2. Amphiphilic alkylations	6
2.1 Amphiphilic carbonyl alkylations	6
2.2 Amphiphilic conjugate alkylations	10
2.3 Amphiphilic conjugate allylations	12
3. Regio- and stereocontrolled Diels–Alder reaction	15
4. Asymmetric hetero-Diels–Alder reaction	16
5. Claisen rearrangement	21
6. Epoxide rearrangement	23
References	28
3. Boron reagents	31
<i>Kazuaki Ishihara</i>	
1. Introduction	31
2. Arylboron reagents with electron-withdrawing aromatic group	32
2.1 Tris(pentafluorophenyl)boron as an efficient, air stable, and water-tolerant Lewis acid catalyst	32
2.2 Diarylborinic acids as efficient catalysts for selective dehydration of aldols	35
2.3 3,4,5-Trifluorophenylboronic acid as an amidation catalyst	37
3. Chiral boron reagents as Lewis acids	39
3.1 Catalytic enantioselective carbo-Diels–Alder reactions	39

3.2 Catalytic enantioselective aldol and allylation reactions	51
3.3 Asymmetric reactions of imines mediated by chiral boron reagents	57
References	61
4. Magnesium(II) and other alkali and alkaline earth metals	65
<i>Akira Yanagisawa</i>	
1. Introduction	65
2. Cycloaddition reactions	65
3. Aldol additions, allylations, and other reactions	71
References	74
5. Zinc(II) reagents	77
<i>Nobuki Oguni</i>	
1. Introduction	77
2. Scope and limitations	77
References	88
6. Chiral titanium complexes for enantioselective catalysis	93
<i>Koichi Mikami and Masahiro Terada</i>	
1. Introduction	93
2. Carbonyl addition reaction	96
3. Carbonyl-ene reaction	101
4. Asymmetric catalytic desymmetrization	105
5. Kinetic optical resolution	106
6. Positive non-linear effect of non-racemic catalysts	107
7. Enantiomer-selective activation of racemic catalysts	110
8. Ene cyclization	111
9. Aldol reaction	113
10. (Hetero) Diels–Alder reaction	118
11. Cyanohydrine formation	129
12. Miscellaneous reactions	130
Acknowledgements	131
References	131

7. Tin Lewis acid	137
<i>Shū Kobayashi</i>	
1. Introduction	137
2. Asymmetric aldol reaction	138
2.1 Preparation of chiral tin(II) Lewis acids	138
2.2 Asymmetric aldol reactions of silyl enol ethers derived from acetic and propionic acid derivatives	138
2.3 Asymmetric synthesis of 2-substituted malate derivatives	140
2.4 Asymmetric synthesis of <i>syn</i> - and <i>anti</i> -1,2 diol derivatives	143
2.5 Catalytic asymmetric aldol reactions	147
3. Asymmetric cyanation reaction	151
4. Asymmetric protonation	153
References	155
8. Silicon(IV) reagents	159
<i>Akira Hosomi and Katsukiyo Miura</i>	
1. Introduction	159
2. Carbon–oxygen and carbon–nitrogen bond formation	160
3. Carbon–carbon bond formation	161
4. Carbon–hydrogen bond formation	164
References	167
9. Silver and gold reagents	169
<i>Masaya Sawamura</i>	
1. Introduction	169
2. Enantioselective aldol reactions of activated isocyanides and aldehydes	169
3. Enantioselective aldehyde allylation with allyltin reagents catalysed by a silver(I)–phosphine complex	173
References	175
10. Zr- and Hf-centred Lewis acid in organic synthesis	177
<i>Keisuke Suzuki</i>	
1. Introduction	177

2. Activation of C–F bond	177
3. Activation of ethers	179
4. Carbonyl activation	180
5. Reductive coupling of allenes and alkynes	182
References	184
11. Scandium(III) and yttrium(III)	185
<i>Shin-ichi Fukuzawa</i>	
1. Introduction	185
2. Scandium(III) triflate	185
2.1 Friedel–Crafts reaction	185
2.2 Acetalization	189
2.3 Acetylation and esterification of alcohol	190
2.4 Allylation of carbonyl compounds with tetra-allyltin catalysed by scandium(III) triflate	192
2.5 Scandium(III) triflate-catalysed Mukaiyama aldol reaction	194
2.6 Diels–Alder reaction	196
3. Cyclopentadienyl yttrium hydride	199
References	200
12. Lanthanide(III) reagents	204
<i>Takeshi Nakai and Katsuhiko Tomooka</i>	
1. Introduction	204
2. Cerium(III) reagents	204
3. Europium(III) reagents	208
4. Ytterbium(III) reagents	214
5. Lanthanum(III) reagents	217
6. Other lanthanide(III) reagents	219
References	221
13. Other transition-metal reagents: chiral transition-metal Lewis acid catalysis for asymmetric organic synthesis	225
<i>Hisao Nishiyama and Yukihiro Motoyama</i>	
1. Introduction	225

2. Activation of haloalkanes and carbonyl compounds	225
3. Catalytic asymmetric Diels–Alder reactions	228
3.1 Achiral transition-metal catalysts	228
3.2 Chiral transition-metal catalysts	229
4. Asymmetric aldol condensations	238
References	242
 14. Lewis acid-assisted anionic polymerizations for synthesis of polymers with controlled molecular weights	 246
<i>Takuzo Aida and Daisuke Takeuchi</i>	
1. Introduction	246
2. Principle, scope, and limitations of ‘Lewis acid-assisted high-speed living anionic polymerization’	247
References	260
